Dear Professor Earhart
I fear I ought to come to
Chicago if Irish Forces
[illegible] Summer but
that is impossible.
Can you come & help
us again here
Yours very truly
R. T. Glazebrook

British Association for the Advancement of Science.

Sixty-Third Meeting,

TO BE HELD IN NOTTINGHAM, 13TH SEPTEMBER, 1893.

The Guildhall,

Nottingham,

June 5 1893.

DSI

DEAR SIR,

We have the honour, on behalf of the Local Executive Committee, to invite you to the Meeting of the BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE, to be held this year in Nottingham, under the Presidency of PROFESSOR J. S. BURDON SANDERSON, M.A., M.D., LL.D, D.C.L., F.R.S., F.R.S.E., F.R.C.P., Waynflete Professor of Physiology in the University of Oxford, in the week commencing *Wednesday, September 13th.*

The Committee desire that you should be their guest during the time of your stay in this city, and it will be their endeavour to do everything possible to render your visit a pleasant one.

The objects of the British Association, and the splendid work it has accomplished in the past, are too well known to men of science of all nations to render it necessary to recapitulate them. It is enough to say that, while the immediate aims of the Association are to stimulate scientific inquiry, and to give systematic direction to research, the Association has always aimed at being a means of promoting intercourse between men who cultivate science in different parts of the British Empire and between British and Foreign Philosophers.

It is the desire of the Local Committee that the Meeting of 1893 should be distinguished by the presence of men of science from every part of the civilized world; for they believe that this personal intercourse will greatly promote the cause of science, and give a special impulse to Scientific Research.

Nottingham is well suited for a meeting which embraces all nationalities. It is central in position, and easily accessible by rail from all the large towns and ports of Great Britain. It is a healthy, clean and picturesque town, with educational and other institutions of the most modern kind: whilst its historical associations, its geological surroundings, its manufactures, and its close proximity to other large manufacturing centres, must afford interest to any visitor.

We shall be glad to receive from you a favourable answer at an early date, in order that the necessary arrangements may be made; and we shall have pleasure in forwarding to you any information concerning routes, railway communications, etc., that you may desire.

We are, DEAR SIR,

Yours faithfully,

Frank Ayres.
William A Heaton.
Arthur P. Johnson
